Integrated Math B Essentials

Course Preparedness Profile & Expectations

This course is designed for students who have had exposure to, but have yet to develop an understanding of all 7th grade standards. Below are some guidelines for choosing the best course for an individual student. This is *not* a placement test and it should *not* be used as the only criteria for making placement decisions.

Student Background

Students entering **Integrated Math B Essentials** should *already* have a good understanding of the following concepts:

- Connecting ratio and rate to whole number multiplication and division
- Analyzing proportional relationships
- Using concepts of ratio and rate to solve problems
- Operations with positive and negative rational numbers
- Writing and interpreting and using expressions, equations, and inequalities
- Reason about and solve one variable equations and inequalities.
- Statistical thinking representing and analyzing quantitative relationships between dependent and independent
- Developing an understanding of statistical variability.
- Describe and analyze data distributions
- Finding common factors and multiples
- Solve real-world problems involving area, surface area, and volume.
- Understand area of polygons and triangles and surface area of prisms and pyramids by decomposing them into pieces whose area they can determine.
- Drawing, constructing and describing geometrical figures.
- Drawing polygons in the coordinate plane.
- Evaluating probability models.

Students entering **Integrated Math B Essentials** should also be able to solve problems such as

		_	diso be dole to solve problems such		
Operations with Decimals Problem	Equal to 5.42	Not Equal to 5.42	Coordinate Geometry Problem		
Write each expression in the correct column	2.36 + 3.06 1.80 × 3 2.16 +	- 3.36	What are the coord points A, B, and C		
Ratios and Fractions Problem			Inequalities Problem	>	
A certain car can travel 25 miles on $2^{1}/_{4}$ gallons of gasoline. At this rate, what is the total number of miles the car can travel on $12^{1}/_{2}$ gallons of gasoline?			Choose numbers from the list below to create three true mathematical statements	-2 6 -5 -6	
Area Problem			Problem Solving		
3 m 3 m What is the area of the figure?			Carlos has 2.4 meters of wire. He needs 1.7 meters for one project and 0.8 for another project. Does Carlos have enough wire? If so, how much will he have left over? If not, how much more does he need?		

Course Content and Expectations

In Integrated Math B Essentials, students will learn concepts such as:

- Working with radicals and integer exponents
- Approximate irrational by rational numbers.
- Analyze proportional relationships and use them to solve real world mathematical problems.
- Use their understanding of ratios and proportionality to solve scale drawings and a wide variety of percent problems.
- Understanding the connection between proportional relationships, lines, and linear equations
- Solving linear equations and systems of linear equations
- Using functions to model relationships between quantities
- Understanding congruence and similarity
- Applying the Pythagorean Theorem
- Investigate patterns of association in bivariate data.
- Use random sampling to draw inferences about a population and draw informal comparative inferences about two populations.
- Investigate chance processes and develop, use, and evaluate probability models.

As in all math courses offered at SDUHSD, students are aware of and make use of all **Standards for Mathematical Practices:**

- 1. Make sense of problems and persevere in solving them.
- 2. Reason abstractly and quantitatively.
- 3. Construct viable arguments and critique the reasoning of others.
- 4. Model with mathematics.
- 5. Use appropriate tools strategically.
- 6. Attend to precision.
- 7. Look for and make use of structure.
- 8. Look for and express regularity in repeated reasoning.

This course is a below grade level course which will have an individualized remediation component. Throughout the course, students will be expected to work collaboratively while problem solving and working on open ended problems.

Integrated Math B

Course Preparedness Profile & Expectations

This course is designed for students who have a strong understanding of 7th grade standards, earning a "C" or higher in Math A. Students entering from Math A Readiness are required to take a summer bridge course and show proficiency.

Below are some guidelines for choosing the best course for an individual student. This is *not* a placement test and it should *not* be used as the only criteria for making placement decisions.

Student Background

Students entering **Integrated Math B** should *already* have a good understanding of the following concepts:

- Analyze proportional relationships and use them to solve real world mathematical problems.
- Operations with positive and negative rational numbers.
- Approximate irrational by rational numbers.
- Use properties of operations to generate equivalent expressions.
- Solve real-life and mathematical problems using numerical and algebraic expressions and equations.
- Draw, construct and describe geometrical figures and describe the relationships between them.
- Solve real-life problems involving angle measure, area, surface area, and volume.
- Solve real-life problems involving volume of cylinders, cones, and spheres.
- Use random sampling to draw inferences about a population and draw informal comparative inferences about two populations.
- Investigate chance processes and develop, use, and evaluate probability models.

Students entering **Integrated Math B** should also be able to solve problems such as

Proportional Reasoning Problem Numerical and Algebraic Equations Tim makes 80 gallons of paint by mixing 48 gallons of A. Jerry needs 216 posts to build a fence. He has 88 posts green paint with 32 gallons of blue paint. What part of and needs p more. Write an equation to show how to every gallon is from green paint? solve for the number of posts Jerry needs. B. Each post requires 8 nails for installation. There are 250 nails in a box. How many boxes of nails does Jerry Probability Problem C. Jerry will build another fence that is 48 feet long. The posts can be a minimum of 5 feet apart and a maximum During a math class, 24 students tossed three coins once. of 9 feet apart. The posts should be equally spaced. How many students would you expect to get a result of 3 Design a fence that uses the fewest posts possible. heads or 3 tails? **Operations with Rational Expressions** Geometry Problem Alex claims that when ¼ is divided by a fraction, the result A framed picture 24 inches wide and 28 inches high. The will always be greater than 1/4. picture will be hung on a wall where the distance from the Create an expression that supports Alex's claim floor to ceiling is 8 feet. The center of the picture must be B. Create an expression that contradicts Alex's claim. 51/4 feet from the floor. Determine the distance from the ceiling to the top of the picture frame.

Course Content and Expectations

In Integrated Math B, students will learn concepts such as:

- Work with radicals and integer exponents
- Understand the connection between proportional relationships, lines, and linear equations.
- Solve linear equations as well as apply graphical and algebraic methods to analyze and solve systems of linear equations in two variables.
- Recognize equations for proportions as special linear equations and understand the relationship between the constant of proportionality and the slope.
- Use linear equations to describe the association between two quantities in bivariate data and to interpret components of the model (i.e. slope and y-intercept) in terms of the situation.
- Solve systems of equations and relate the systems to pairs of lines in the plane.
- Define, evaluate, and compare functions, and use them to model relationships among quantities.
- Understand how figures behave under translations, reflections, dilations, and rotations.
- Understand congruence and similarity to describe and analyze two-dimensional figures and to solve problems.
- Relates angles and similar triangles created when a transversal cuts parallel lines.
- Understand and apply the Pythagorean Theorem
- Solve real-world and mathematical problems involving volume of cylinders, cones, and spheres.

As in all math courses offered at SDUHSD, students are aware of and make use of all **Standards for Mathematical Practices:**

- 1. Make sense of problems and persevere in solving them.
- 2. Reason abstractly and quantitatively.
- 3. Construct viable arguments and critique the reasoning of others.
- 4. Model with mathematics.
- 5. Use appropriate tools strategically.
- 6. Attend to precision.
- 7. Look for and make use of structure.
- 8. Look for and express regularity in repeated reasoning.

Grades will be calculated within the following guidelines:

Assessments: 70-80%Assignments: 20 – 30%

Students will be expected to work collaboratively as well as individually. On a regular basis, classes will include:

- Group problem solving followed by group presentations.
- Open ended problems that are applications of the content being covered.
- Challenge problems, which may consist of detailed diagrams and a single page write-up.

Integrated Math B Honors

Course Preparedness Profile & Expectations

This course is designed for students who have mastered 7th grade standards, earning a "B" or higher in Math A Honors. Math B Honors is a challenging course, covering all Math B standards in greater depth and rigor and is intended for students who excel in math.

Below are some guidelines for choosing the best course for an individual student. This is *not* a placement test and it should *not* be used as the only criteria for making placement decisions.

Student Background

Students entering **Integrated Math B Honors** should easily grasp higher level concepts and embrace rigorous curriculum. Students should *already* have mastered the following concepts:

- Analyze proportional relationships and use them to solve real world mathematical problems.
- Operations with positive and negative rational numbers.
- Approximate irrational by rational numbers.
- Use properties of operations to generate equivalent expressions.
- Solve real-life and mathematical problems using numerical and algebraic expressions and equations.
- Draw, construct and describe geometrical figures and describe the relationships between them.
- Solve real-life problems involving angle measure, area, surface area, and volume.
- Solve real-life problems involving volume of cylinders, cones, and spheres.
- Use random sampling to draw inferences about a population and draw informal comparative inferences about two populations.
- Investigate chance processes and develop, use, and evaluate probability models.

Students entering Integrated Math B Honors should also be able to solve problems such as

Proportional Reasoning Problem	Numerical and Algebraic Equations
Tim makes 80 gallons of paint by mixing 48 gallons of green paint with 32 gallons of blue paint. What part of every gallon is from green paint? Probability Problem	Tom bought several appliances and a new car. He paid a sales tax of 7.5% on the appliances and a tax of 6.5% on the car. Before these taxes, the appliances and car together cost \$15,200. If he paid a total of \$1015 in taxes, how much did the car cost?
Given two dice, explain why P(rolling a 1, and then 6) = $\frac{1}{36}$ but P(rolling a sum of 7) = $\frac{1}{6}$	
Geometry Problem	Operations with Rational Expressions
The length of a rectangle is 10 m greater than twice its width. If the lengths were doubled and the widths were halved, the perimeter of the new rectangle would be 80 m more than the perimeter of the original rectangle. What are the dimensions of the original rectangle?	Alex claims that when ¼ is divided by a fraction, the result will always be greater than ¼. A. Create an expression that supports Alex's claim B. Create an expression that contradicts Alex's claim.

Course Content and Expectations

In **Integrated Math B Honors** students will go deeper into grade level standards. Student assignments will contain more critical thinking and have a higher depth of knowledge and more performance tasks. Students will learn concepts such as:

- Work with radicals and integer exponents
- Understand the connection between proportional relationships, lines, and linear equations.
- Solve linear equations as well as apply graphical and algebraic methods to analyze and solve systems of linear equations in two variables.
- Recognize equations for proportions as special linear equations and understand the relationship between the constant of proportionality and the slope.
- Use linear equations to describe the association between two quantities in bivariate data and to interpret components of the model (i.e. slope and y-intercept) in terms of the situation.
- Solve systems of equations and relate the systems to pairs of lines in the plane.
- Define, evaluate, and compare functions, and use them to model relationships among quantities.
- Understand how figures behave under translations, reflections, dilations, and rotations.
- Understand congruence and similarity to describe and analyze two-dimensional figures and to solve problems.
- Relates angles and similar triangles created when a transversal cuts parallel lines.
- Understand and apply the Pythagorean Theorem
- Solve real-world and mathematical problems involving volume of cylinders, cones, and spheres.

As in all math courses offered at SDUHSD, students are aware of and make use of all **Standards for Mathematical Practices:**

- 1. Make sense of problems and persevere in solving them.
- 2. Reason abstractly and quantitatively.
- 3. Construct viable arguments and critique the reasoning of others.
- 4. Model with mathematics.
- 5. Use appropriate tools strategically.
- 6. Attend to precision.
- 7. Look for and make use of structure.
- 8. Look for and express regularity in repeated reasoning.

Grades will be calculated within the following guidelines:

Assessments: 70-80%Assignments: 20 – 30%

Students will be expected to work collaboratively as well as individually. On a regular basis, classes will include:

- Group problem solving followed by group presentations.
- Open ended problems that are applications of the content being covered.
- Challenge problems, which may consist of detailed diagrams and a single page write-up.
